ENSUING EVENTS FOR THE MONTH OF **NOVEMBER 2011 AT THE CAMPUS**

1 ST BIOGRAPHY PRESENTATION CUM

of renowned scientists, architects, engineers and managers. some insight into how we choose to live our lives. winners will be awarded.

3rd OUTBOUND LEARNING PROGRAMME:

This programme proposes exposure of students out of comfort This programme proposes exposure of students out of comfort zone of their normal classroom environment. It involves ride every wave, even though we might like too. On the other hand, we moving students out of doors, participate in some specially can paddle around being extremely selective, in the hope of finding designed exercises and games, thereby, enrich and enhance students persona enabling them to get compatible with industry expectations. Outbound Learning Programme is being organized by CRC (T&P) for all students of Campus at National Bird Sanctuary, Bharatpur,

8th A PRESENTATION ON LEADERSHIP

It will be conducted by Prof H L Verma Director CRC (T&P). What is the importance of Leadership in the lives of each and every individual shall be discussed in detail and how can we develop the leadership skills will also be focused on

9th A GUEST LECTURE ON MOTIVATION

It will be delivered by Mr Mahesh Khandelwal CMD of The waves keep coming. Which ones will you choose to ride? Khandelwal Cables Ltd. Motivation is literally the desire to do things. It's the crucial element in setting and attaining goals-and research shows you can influence your own levels of motivation and self control. The lecture will be organized by CRC, Training and Placement Dept.

14th A PRESENTATION ON MEMORY ENHANCEMENT

It will be conducted by Dr Devesh Agarwal Asso Prof School of Management, Lack of focus and concentration among students 5. is not uncommon. This too a large extent is due to the playful nature of children, distraction by television or computer games or the Internet. Lack of interest in a subject can be another reason. How can we improve this apathy will be focused in this presentation

17TH TO 23RD PRE UNIVERSITY TEST (PUT) WILL BE CONDUCTED IN ALL THE THREE SCHOOLS 10. SIMULTANEOUSLY

THE WAVES OF LIFE

Dreams ride the waves of life. When they get to shore they break, unless caught by a surfer, only then are they brought into reality. We are all surfers on the waves of life, we choose which waves we ride and which waves

I recently put up some new prints in my home, one of A Presentation cum competition will be conducted on the lives breaking. It got me thinking about how a surfing analogy can provide breaking. It got me thinking about how a surfing analogy can provide

Students of all the schools will be the participants and the We are the instigators of our dreams. We create the reality we desire, by acting upon our inspirations. The dreams that we have relate directly to our goals. We may not always get what we want, but often the problem lies not in obtaining what we want, but in firstly deciding what opportunities to follow.

> that one elusive awesome ride (which may never come). Or we can get out there, take some reasonable risks and explore all that life offers us. Taking risks enables us to experience new things. We may make a few mistakes, fall off our boards and even get "wiped out", but without taking any risks at all we cannot learn and grow. The wipe outs or mistakes allow us to reflect. They help us to identify changes we need to make so we can advance. But if we paddle around aimlessly without taking any risks, we will never fully experience all of the dimensions

> We may sometimes try to ride waves that we aren't yet ready to tackle The wave just behind or in front may have been a better choice. But this is really a matter of growth and wisdom; knowing which opportunities suit our personality and goals. We may pick the wrong wave or realise that something isn't quite right with the ride but we learn and grow in the process of choosing

Ragini Gupta (Asst Prof School of Management)

THOUGHTS ON EDUCATION

- Sourges as a punce where a student ought to team not so muen now to make a living subthow to live.

 Education today, more than ever before, must see clearly the datal objective oclutation for living and educating for making a living.

 The most involvable must be considered to the control of the most window of the most involvable must be control of the individual and the significant of a life to himself and to observe the personal to the most many than the most many
- Education is helping the child realize his potentialities.
- Education is helping the child realize his potentialities. EIROR FORMS The object of education is to prepare the young to educate themselves throughout their lives.

 Robert Maynard Hutchins Education is what survives when what has been learnt has been forgotten.

 B. F. Skinner
- The secret of education is respecting the pupil. Ralph Waldo Emerson
 The deepest personal defeat suffered by human beings is constituted by the
 difference between what one was capable of becoming and what one has in fact
- Each second we live is a new and unique moment of the universe, a moment th will never be again... And what do we teach our children? We teach them that tw and two make four, and that Paris is the capital of France.

 When will we also teach them what they are?

 Pablo Casals

SCOPE OF ENGINEERING

Engineers apply the principles of science and mathematists to develop economical solutions to technical problems. Their work is the link between scientific discoveries and the commercial applications that meet societal and consumer needs. Many engineers develope new products, During the process, they consider several factors. For example, in developing an industrial robot, engineers specify the functional requirements precisely; design and test the robot's components; integrate the components to produce the final design; and the components of products which as schemicals, computers, power plants, belicopters, and toys. In design and development of many different products, such as schemicals, computers, power plants, belicopters, and toys. In design and development, many engineers work in testing, production, or maintenance. These engineers supervise production in factories, determine the causes of component's failure, and test manufactured products to maintain quality. They also estimate the time and cost required to complete projects. Supervisory

engineers are responsible for major components or entire projects. Engineers use computers extensively to produce and analyze designs; to simulate and test how a methine, structure, or system operates; to generate specifications for parts; to monitor the quality of products; and control the efficiency of processes, Amotechnology, which involves the creation of high-performance materials and components by integrating atoms and molecules, also is introducing entirely new principles to the design process.

Message from the Director's Desk ...

Dear sinuens:

Heartiest Congratulations for choosing Hardayal Technical Campus for shaping your career. We welcome you into our fold with great pride observing your keen interest to pursue technical education. It is a matter of great pleasure that your endeavour corresponds to our vision which is to enhance student potential for achievement in their chosen field of profession.

October, 2011

With the above features in mind, our faculty and staff has been dedicated to the provision of quality training courses and programmes, and to, wentor our students towards their future success. We are committed to provide individual attention, world class quality education and take case of characteristics.

It is our endeavour to maintain the eminence by advancing all aspect of technical education with the collateral arts and science. We are developing partnerships with institutions outside India which involves joint programme planning and sharing of information resources and materials, linkage of communities of practice and interest groups across border.

We will ensure adding value beyond the curriculum and achieve building connectivity around the nation. Our aim is to have continuous pursuit for excellence through Culain and active doubter outside for mentional and international resources. By the wave continuous pursuit for excellence through Culain and Autocardin to the continuous programmed evaluation and international resources. By programmed evaluation of favol system and united to during output to the continuous review and renewal such active and the continuous review and renewal such as the continuous review and review and renewal such as the continuous review and renewal review and revi

In order to realize our dream described above. I would like you to Think big--- Ahead of boundaries.

. Dream --- Beyond reality.

 Pursue Present---Forget past, don't bother future. · Possess Passion---Progress vehemently.

Be smart --- Not hardworking

Have a role model---Walk in his /her foot steps.

. Do it now---Don't leave for tomorrow.

. Succeed the failure --- Don't fail the success

I am sure, with clear visions, well defined mission, correctly crafted objectives, every goal/aim will not only be achievable but sustainable and maintainable.

May God Bless You! Dr K K Malviva, (Director Academics)

Avneesh Singh (1st Sem MBA)

We believe that we are in the era of "time compression" where we vividly remember things. We ignore this habit of forgetting things and sometimes don't take it seriously.

It's a form of selective memory that all of us are being forced into. Our brain just deletes old information the way we clean up our computer's hard drive to free up some space

for new information our brain sends only useless information to the recycle bin or the things/work which we do carelessly doesn't save/store in the brain completely, but strikes to the mind when we move back or role back our imagination or just simply focus.

Some feel that long term memory is reducing with each generation. A lot of kids today easily forget what they learned just a few days ago, unless the teacher find a way to make it a familiar form of learning and put it up as a video, or make a

At last it can be said that if you are self-confident then think clickable and fun interface

Adults also rely too much on technology to do just about anything. We use reminder software to tell us what to do today and rely on social networking sites like facebook to tell us whose birthday it is. A lot of us don't remember what we studied in college, and some of us even forget our own password. If we get a virus, or problem with some system setting, we google the solution and fix the problem. If the same problem re-occurs a week later, we probably will not remember the solution and just google for it again.

We are so much dependent on technology but still "survival of the fittest" wins any how. Now I m not suggesting to drop everything we are doing and start reading survival guides, build bomb shelter and arm our self. That's all crazy talk we can limit our brains dependence on technology by trying to "remember more and click less". We can sharpen our minds by our ability and can boost our knowledge by learning and reminding or revising in form of small/quick notes.

Tushar Khanna (Ist Sem BTech CS)

SELF-CONFIDENCE -A KEY TO SUCCESS

How often do we envy the man or women who succeed? And even when we do not envy them, we certainly wish we could do the same as they have done. We console our self with the excuse that they have all the luck and we are followed with misfortunes. But if we are prepared to learn the truth we shall have

The first essential to success is faith in our self. This is the outstanding trial in all men and women who have reached the top. It is not enough to have faith in yourself but there must be courage to act on that faith. If you want to achieve success, you must set mark for yourself and go ahead to reach it.

The last essential to success is enthusiasm Enthusiasm is not mere excitement. It is a driving force that urges one to go on and on as if you wear possessed. It is true that failures are important. Only failures can bring out the inner reserve of strength in us, just as heat brings out the precious metal from the ore.

positive, have positive approach and do the best in whatever you do. When you have done your best leave the rest to Almighty God.
